

GREATER WATERFLOW

RAINTECH downpipes offer a 16% greater water flow than traditional 50x100mm rectangular downpipes.

100% RUST FREE

Made in sturdy UPVC, Raintech will never rust, corrode or be affected by salt air or chemicals.

PAINTABLE - ANY COLOUR

The downpipe itself can be painted any colour to match any external decor.

Unlike a round pipe, the walls can be painted flush with the downpipe.

EASY TO INSTALL

Can be easily cut to size, unlike metal downpipes. Lightweight and easy to install.

RAINTECH

The revolutionary downpipe system designed for every home

The RAINTECH downpipe system not only performs better than traditional systems. It's simple to install, paintable and costs no more than a traditional system. At last a downpipe system with 'good looks'.

SECURITY

Through RAINTECH's innovative half-round design, the downpipes cannot be climbed upon, preventing entry to a second storey.

NO UGLY FITTINGS - JUST CLEAN LINES

All fittings are internal, giving the whole system an unmatched clean line.

There is also a choice of completely hidden brackets or external wall straps.

CLEANER

The smooth design virtually eliminates external dirt build up and streaking.

COST EFFECTIVE

All these features cost no more than an ordinary system.
